The aim of the Course of Endoscopy in Pain Therapy is to develop endoscopic techniques in the treatment of common diseases like Low Back Pain, Sacroileitis and Peripheral nerves pain. This course gives the participants an overview of endoscopic possibilities and new approaches in Pain Therapy. The course is divided in two sessions, a frontal didactical part with an explanation of anatomy and physiopathology of facet joint pain, sacroiliac pain and peripheral nerves disturbs, and it is followed by a practice part with 2 / 3 surgical procedures performed by Dr. Meloncelli and his equipe with a direct explanation of surgical aspects.
